

# THE BEST PRODUCTS TO USE WHEN MAINTAINING YOUR CERAMIC COATING

admin | March 20, 2023

Ceramic coatings have become increasingly popular in recent years because they protect your vehicle's paint from harsh weather conditions, dirt, and debris. However, proper maintenance is necessary to keep the ceramic coating in its best condition. This article will discuss the best products to use when maintaining your ceramic coating.

## MICROFIBER TOWELS

A **good-quality microfiber towel** is the first and most important tool in maintaining your ceramic coating. These towels are incredibly soft and gentle on the paint and excellent at absorbing water and cleaning solutions. Additionally, they don't leave any streaks or swirl marks on the surface of your car.

When choosing a microfiber towel, go for a high-quality one. Avoid using cheap towels, as they can scratch the surface of your car and cause more harm than good. If you want to learn how to maintain ceramic coating for a car, this certainly forms part of the elementary steps.

## PH-NEUTRAL SHAMPOO

When washing your car, it is essential to use a pH-neutral shampoo. Regular car wash soaps are usually too harsh and can damage the ceramic coating. pH-neutral shampoos, on the other hand, are gentle on the paint and do not strip the protective layer.

When washing your car, use a bucket and two microfiber wash mitts. Use one mitt for the upper body and another for the lower body of your car. This will help prevent scratches and swirl marks.

Over time, ceramic coatings can lose their effectiveness, and the paint can become vulnerable to environmental contaminants. To combat this, you can use a ceramic coating booster to help restore the coating's protective properties.

A ceramic coating booster contains a high concentration of SiO<sub>2</sub> (silicon dioxide), which helps to restore the protective layer. It is easy to apply and can be used after washing your car or as a standalone product.

## IRON REMOVER

Iron particles can embed themselves in your car's paint, causing rust and other damage. To remove these particles, you need a good-quality iron remover. Iron removers are designed to dissolve iron particles, making them easy to remove with a microfiber towel.

When using an iron remover, it is essential to follow the instructions carefully. Wear gloves and eye protection and rinse the car thoroughly after use.

## DETAILING SPRAY

Detailing spray is a quick and easy way to maintain the shine of your car's paint and ceramic coating. It is a spray-on product that is easy to apply and wipe off. Detailing spray can be used after washing your car or as a quick touch-up between washes.

When choosing a detailing spray, look for one that is designed specifically for use with ceramic coatings. These sprays are formulated to enhance the protective layer of the ceramic coating and keep your car looking its best.

## CLAY BAR

Clay bars are an essential tool in maintaining your ceramic coating. They are designed to remove contaminants in your car's paint, such as tree sap, bird droppings, and tar. These contaminants can be challenging to remove with a regular car wash, but a clay bar can remove them easily.

When using a clay bar, make sure to follow the instructions carefully. Lubricate the surface of your car with a detailing spray, then gently rub the clay bar over the surface. After use, rinse the car thoroughly to remove any remaining clay residue.

## WAX

Waxing your car can help to enhance the shine of your car's paint and ceramic coating. It also helps to protect the paint from environmental contaminants and UV rays. There are many different types of wax on the market, so it is essential to choose one designed for ceramic coatings.

Maintaining your ceramic coating is essential to ensure your car stays protected and looks its best. Using the right products is critical in ensuring that your ceramic coating remains effective and that your car's paint is protected from **environmental contaminants**.

This article discussed some of the best products to use when maintaining your ceramic coating, including microfiber towels, pH-neutral shampoo, ceramic coating booster, iron remover, detailing spray, clay bar, and wax. Using these products correctly ensures that your car stays protected and that your ceramic coating remains effective. To relieve this burden, **get in touch** today for a free quote.
